

ECO-PENS 2020

INGLI SWEDEN
GIVE A PEN - GET VALUE

Our range of Eco pens

The environment is one of our most important sustainability issues. We offer a wide range of eco pens made from materials that are better for the environment from a sustainability perspective.

It should be easy to make the right choice

Our ambition is to provide and constantly expand our eco range of promotional pens. It is our responsibility to inform about which pens are better for the environment and try to steer our customers and partners towards more eco-friendly alternatives. It should be easy to make the right choice.

Materials with less environmental impact

In our range, we have a variety of pens made of materials with less environmental impact compared to traditional, new produced plastic. For example, we offer promotional pens made of:

– Wheat Hybrid, plastic with 40% wheat straw

Our hybrid pens are better-adapted alternatives to the environment. As the plastic consists of 40% wheat

BE SURE TO MAKE THE RIGHT CHOICE!

straw which contributes to a reduced amount of new-produced plastic.

– Ingeo® PLA, biodegradable

Our pens in PLA are made of a patented and environmentally certified material from NatureWorks called Ingeo®. Ingeo® PLA is extracted from renewable raw materials, such as plant fibres and lactic acid, and has unique properties that are not found in traditional plastics. The material is biodegradable and compost-able at temperatures above 60°C so that it can re-enter the natural cycle. Also, the production of PLA requires only one-third of the energy needed for the manufacture of ordinary ABS plastic.

– Recycled ABS

ABS is a sustainable and durable plastic with a nice lustre that works great to recycle. The advantages of plastic recycling are many. Pens of recycled ABS are a good environmental choice as it contributes, among other things, to reduced new production of plastic and the utilization of non-renewable raw materials.

– rPET, recycled PET-plastic

Promotional pens made from recycled rPET plastic are constantly increasing on the market. It is a light and strong plastic that is very durable. rPET is made of 100% recycled PET bottles and can be reused for new products many times. rPET plastic is not environmentally friendly in itself, but it does have less impact. As with all plastic recycling, manufacturing in rPET also contributes, for example, to reduced waste disposal and reduced oil dependency.

– Recycled paper

Recycled paper is, from an environmental point of view, generally a better material than plastic. Among other things, plastic production releases considerably more greenhouse gases than the corresponding paper production. Also, production with recycled paper swallows considerably less energy. To recycle paper and use for manufacturing other products also contribute to resource-efficient production and reduced waste, which is necessary for our circular economy.

Our work for sustainability!

Ingli Sweden is striving for sustainable business. The key areas of sustainability is environment, employment, human rights, anti-corruption and responsible leadership. Our corporate responsibility is in especially three areas: economic, social and environmental. We have chosen a strategy that is based on the fact that we are part of the problem, which means we can also become part of the solution towards sustainable development. We are constantly working to integrate sustainability in our operations as well as in the products and services we offer.

Code of Conduct

We support the guidelines of United Nations’ Global Compact and accept our responsibility regarding human rights of those affected by our activities as well as our responsibility to contribute to sustainable development in society. We have established a social code of conduct that applies to our own operation and in the relationship with suppliers of products and services. The code is a natural part of our work

SUSTAINABILITY FOR CURRENT AND FUTURE GENERATIONS!

and describes among others the legal requirements and demands of working conditions, working and living environment. Contact us if you want to take part of our documentaton.

We think it is important that our operation leave as little impact on the environment as possible. This is achieved by making environmental demands to our suppliers and being aware of our own deficiencies. Our main activities right now are to:

- Most of our new products are eco-friendly and we try to guide our customers in making sustainable choices
- We optimize our transports to reduce the environmental impact, eg. we cotransport goods from Asia by boat. It is important to realize that shipping is an essential part in purchasing sustainable products.
- We economise our resources and have the highest possible level of recycling.
- We use 100% renewable energy.

Of course we also comply with applicable environmental laws and constantly work to reduce our impact on the environment.

Ingli Sweden wants to extend its responsibility beyond that required by law. This is why we have chosen to become certified within the framework of ISO quality and environmental management standards in accordance with ISO 9001:2015 and ISO 14001:2015. Our quality- and environmental management system helps us meet the challenges we face and take advantage of the opportunities with which we are presented. We want to contribute to the long-term, sustainable development of our planet and the people that live here, both current and future generations. The work we have started together is something we take great pride in. It is a task that will never end, but the fact that we are working together towards achieving a more sustainable future is a source of joy and commitment.

Our overall, long-term quality goal is to continually act to reduce quality deficiencies and raise the quality of our products and services while our environmental goal is to increase the proportion of products made from materials with less environmental impact.

rPET RECYCLED PET-PLASTIC

Promotional pens made from recycled rPET plastic are constantly increasing on the market. It is a light and strong plastic that is water resistant and very durable. rPET is made to 100% of recycled PET bottles and can be reused for new products over and over again. rPET plastic is not environmentally friendly, but it does have less impact. As with all plastic recycling, manufacturing in rPET also contributes, for example, reduced waste disposal and reduced oil dependency.

RECYCLED PAPER

Recycled paper is, from an environmental point of view, generally a better material than plastic. Among other things, plastic production releases considerably more greenhouse gases than the corresponding paper production. Also, paper production with recycled paper swallows considerably less energy. To recycle paper and use for manufacturing other products also contribute to a resource efficient production and reduced waste, which is necessary for our cycle society.
